TO WHOM IT MAY CONCERN

I write as a qualified academic architect (Dipl. Ing.) with special training in urban planning and ecological housing. In my work I am oriented in Danish and Dutch examples of new cities and human housing and also in ecological techniques.

I heard about Bhagwan and his work in Rajneeshpuram from friends of mine and through some publications. During my journey to California this year I visited the town of Rajneeshpuram.

I have to state that the achievement of creating a city there and an urban plan is outstanding. It guarantees human living in keeping with the landscape and with nature. You can feel Bhagwan's inspiration behind it. I think people can live there in harmony with themselves and in harmony with the natural surroundings very well. It is an ideal housing project and I hope it will get the chance to develop in the next years.
